

## Correct Use

Please mind the following tips to maintain the high quality and usage property of the saddle.

Your saddle possesses a high-modern, flexible saddle-tree, that absorbs the movement of horse and rider and transfers it correctly. Such a desired flexible construction should not be burdened one-sided in a wrong way for a long time. Please do not pull yourself up with the right hand on the cantle (fig. 1), but reach completely over the seat with your right hand (fig. 2).

It is even more recommended to use a step, e.g. a stool or a mounting block (fig. 3), for mounting in order to protect the saddle and the horse's back.

Always store your saddle on a purpose-built saddle rack to ensure the saddle's weight rests evenly on the panels.

Please tighten the girth hole by hole from both sides before and after mounting. Use girths with intact roller buckles to protect the saddle girth straps.

fig. 1: Please do not mount like shown here!

fig. 2: Please mount like shown here!

fig. 3: For the protection of the horse's back and the saddle please use a mounting block to get into the saddle.
